# Agenda

- Introduction
- Status Update
- Demo

# Why Dynamic Languages?

- Faster development time/less overhead
- Shorter code iteration
- Cleaner syntax
  - > Braces, blocks, Semicolons, “fluff”

# Lets look at sample code...

## Java

```
1 public class Fib {
2   public static void main (String[] args) {
3     System.out.println(fib(10));
4   }
5   private static int fib(int n) {
6     if (n == 0) {
7       return 0;
8     } else if (n == 1) {
9       return 1;
10    } else {
11      return fib(n-1)+fib(n-2);
12    }
13  }
14 }
```

## Ruby

```
1 def fib ( number )
2   if (0..1).include? number
3     number
4   else
5     fib(number - 1) + fib(number - 2)
6   end
7 end
8 puts fib(10)
```

# Dynamic Languages on JVM

- JVM is
  - > mature
  - > runs fast
  - > real threads
  - > ubiquitous
- Several implementations
  - > JRuby, Jython, Groovy, Clojure, Scala, PHP...

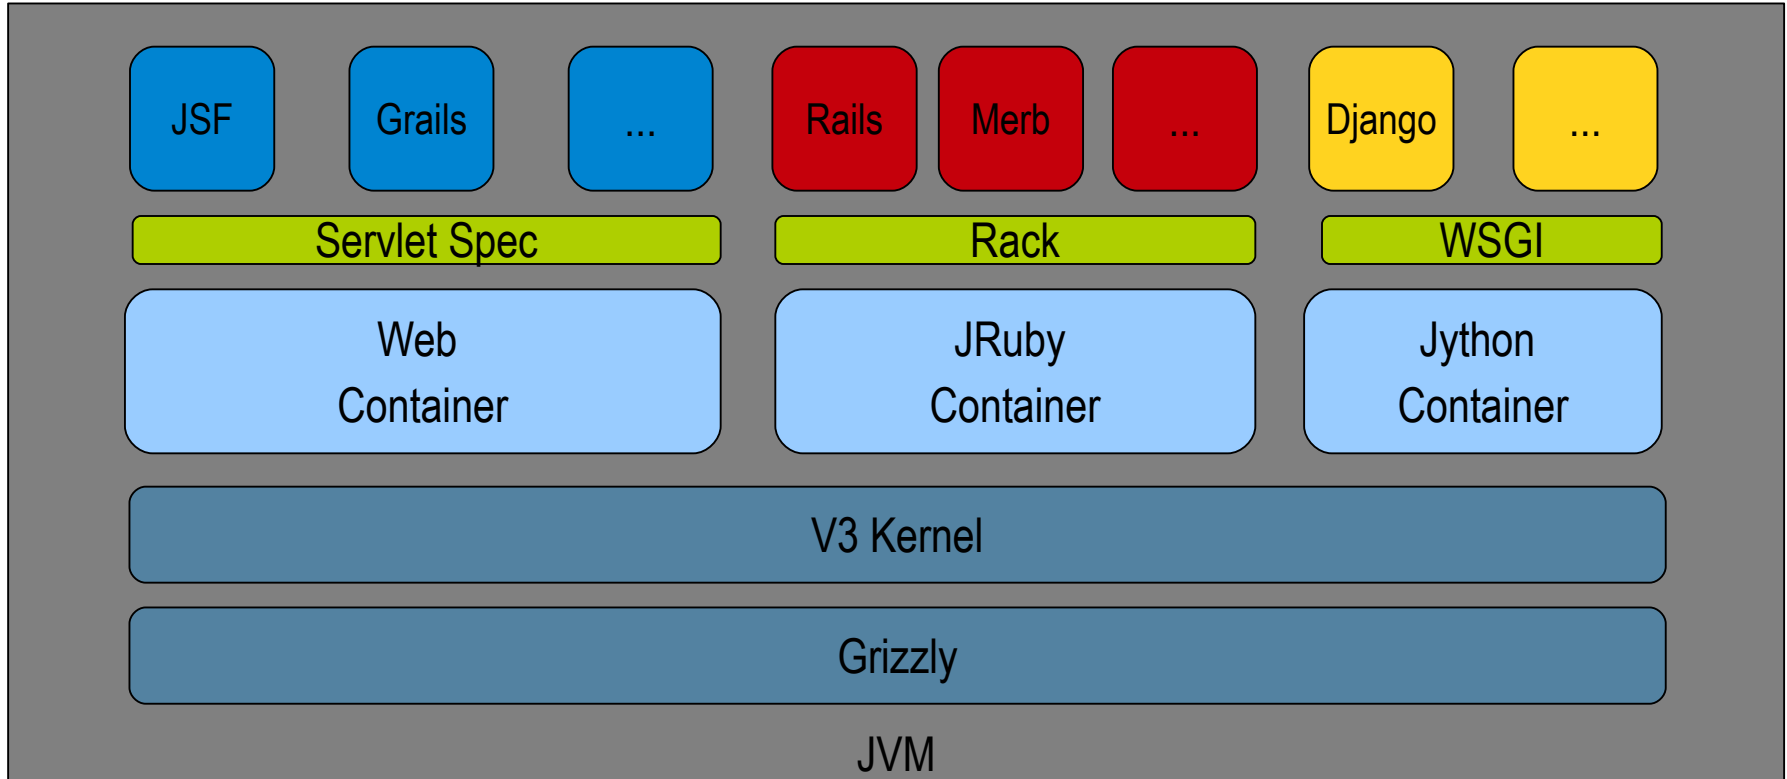

# Why not run these on GlassFish v3?

- GlassFish v3: extensible, modular, pluggable
- Harness JVM benefits
- Build on robust JavaEE technologies
- Re-use investment in Java

# Pluggable Web Frameworks

- Key
- GlassFish v3 Modules
  - Java Framework
  - Python Framework
  - Web Framework Interface
  - Ruby Framework

# What you can do with GlassFish v3?

- You can run
  - > Any Rack compliant Ruby framework
    - Rails, Merb, Sinatra or your own framework (Rackup script)
  - > Python/Django applications
  - > Groovy/Grails applications
  - > Scala/Lift, PHP(Quercus/Java-PHP bridge)
- ...and also
  - > Monitoring and administration of Ruby on Rails or any other Rack applications
  - > Netbeans develop, deploy and debug Ruby on Rails on GlassFish v3

# Status Update - Ruby

- GlassFish v3 ships with JRuby container
- You need to install JRuby and required gems
  - > Get it using updatetool or get directly from [jruby.org](http://jruby.org)
- Tested to work with
  - > JRuby  $\geq$  1.3.0, Rails  $\geq$  1.2.6
- Deploy

```
$ asadmin deploy --property jruby.home=/tools/jruby  
~/myRailsApp
```

# Status Update - Ruby

- Administration
  - > Admin Console is Ruby aware
  - > **configure-jruby-container** asadmin CLI command
    - Set various JRuby container specific properties: JRuby home, JRuby runtime pool, enable/disable monitoring
  - > Lots of deploy time properties
- Monitoring
  - > Stats
    - JRuby container
    - HTTP
    - JRuby runtime pool
  - > Admin console or Jconsole, dTrace or your custom script

# Status Update - Ruby

- GlassFish gem
  - > Built on top of GlassFish v3 kernel
    - Uses GlassFish embedded API
  - > Replacement for Mongrel and other Ruby web servers
  - > Ruby friendly

```
GlassFish::Server.start(:port => 3000) do
  Proc.new {|env| [200, {"Content-Type" => "text/html"},
                  "Hello"]}
end
```

- Visit: <http://glassfishgem.rubyforge.org/>

# Status Update - Python

- Jython container available from GlassFish UpdateCenter
  - > \$ glassfishv3/bin/updatetool
- You need Jython installation
  - > Get it from GlassFish UpdateCenter or from [jython.org](http://jython.org)
- ...and Django as well
- Tested to work with Jython  $\geq$  2.5.0, Django 1.1.1
- Deploy the same way

```
$ asadmin deploy --property  
    jython.home=/tools/jython ~/myDjangoApp
```

# Status Update - Grails

- Grails production mode fully supported
- No GlassFish for run-app
- shared-war not supported (grails  $\geq$  1.0)

# Status Update - Others

- Scala/Lift works just fine
- and so does PHP using Quercus or Java-PHP bridge

# Demo Rails

# Summary

## GlassFish v3 home to Dynamic Languages

- Easy deployment, monitoring and administration of Ruby on Rails or any other Rack framework
- Easy deployment of Python/Django, Grails, Lift, PHP
